

Microsoft Dynamics 365 and Power Platform Community Conference

MAY 26 – 28, 2025
Portorož, Slovenia, Europe

Testing is boring...
Until now!

Microsoft Dynamics 365 and Power Platform Community Conference

MAY 26 – 28, 2025
Portorož, Slovenia, Europe

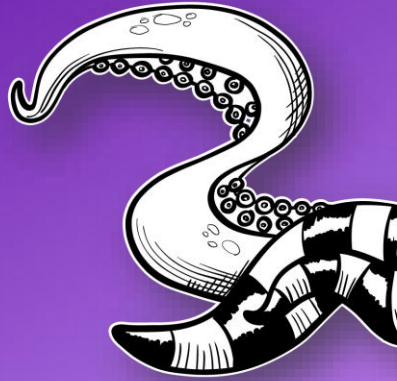

Tine Starič

Software Architect @ Companial

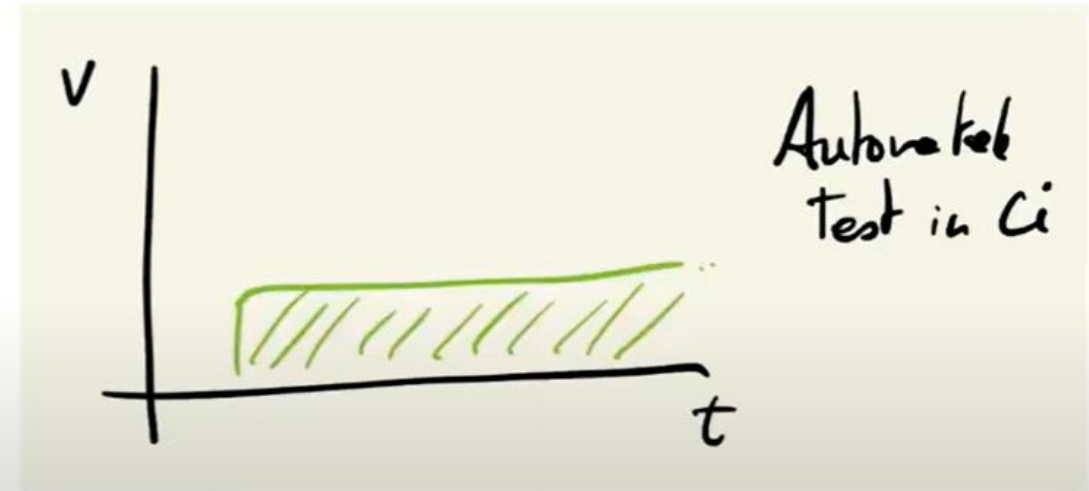

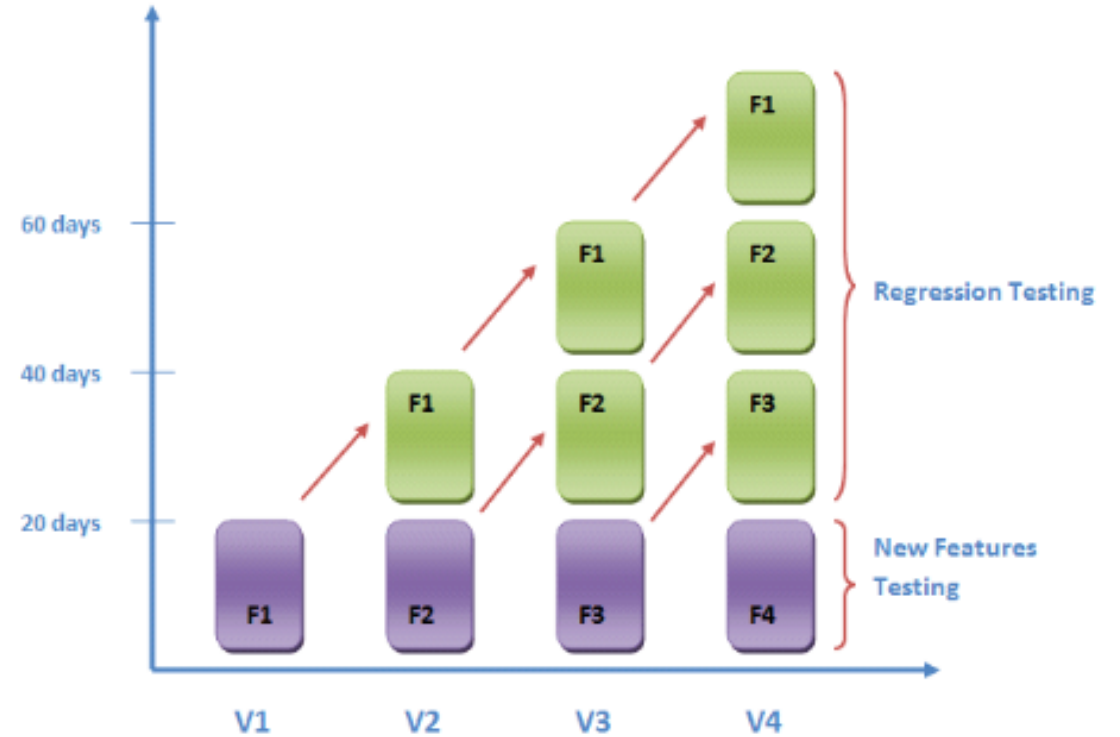

I'm willing to fight for Test
Automation...
And I think you should too!

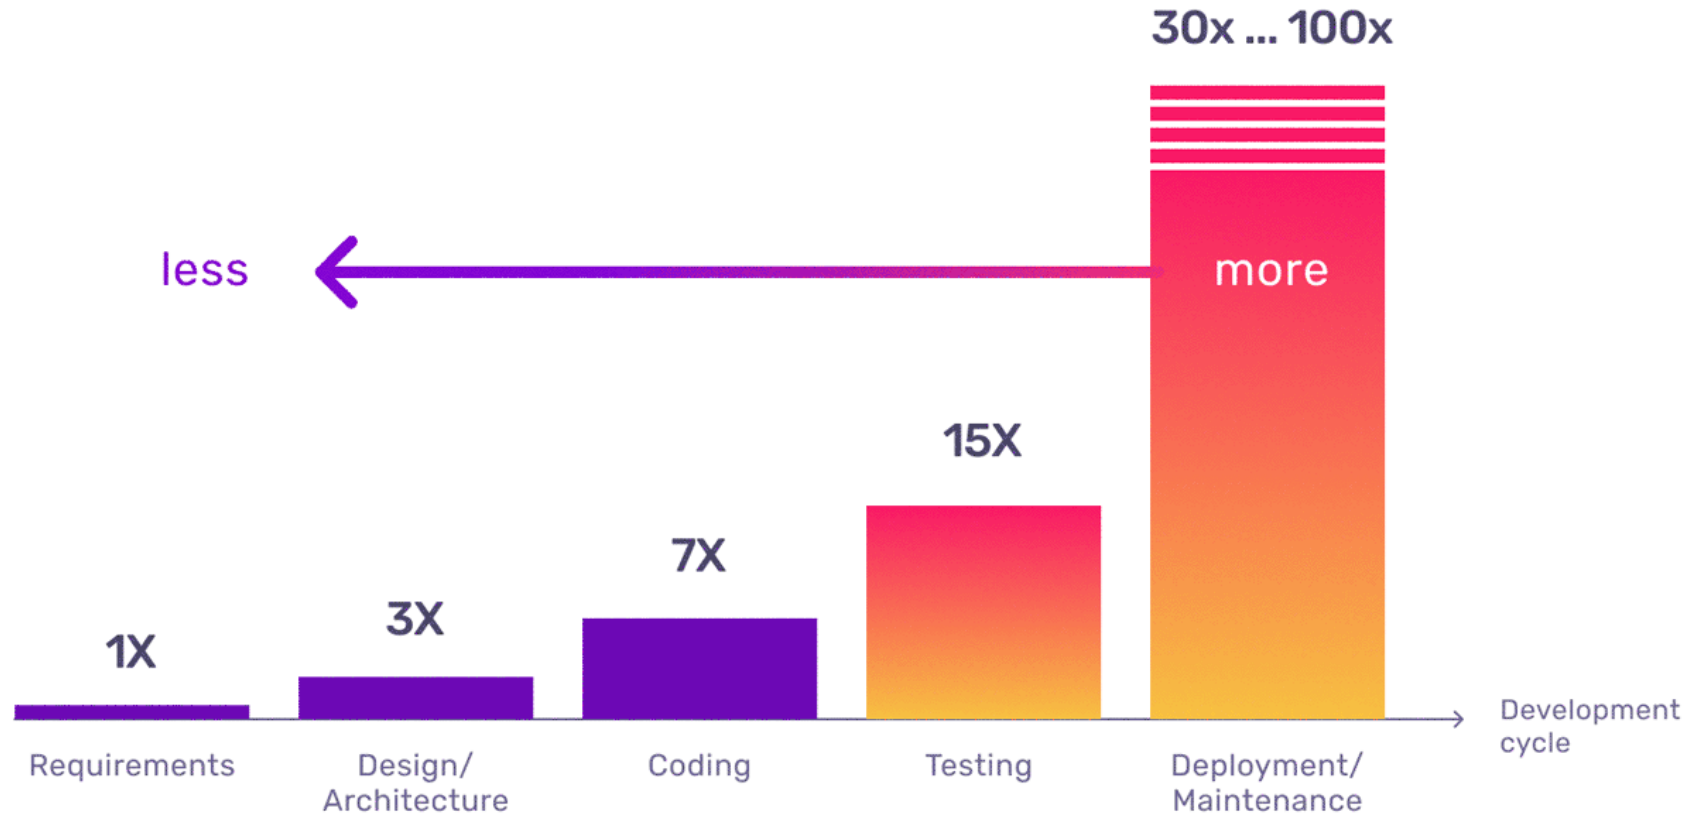

Traditional testing

[Xavi Ametller Serrat](#)
[Webinar](#)

Cost of Defects

The more time we save your team, the more time they have to find bugs sooner.

That Saves Money

Traditional testing

```
[Test]
0 references | Run Test | Debug Test
procedure TestSalesOrderRelease()
var
    SalesHeader: Record "Sales Header";
    ReleaseSalesDocument: Codeunit "Release Sales Document";
    LibraryAssert: Codeunit "Library Assert";
begin
    // [Given] Sales Header
    SalesHeader := CreateSalesOrder();

    // [When] Sales Header is released
    ReleaseSalesDocument.ReleaseSalesHeader(SalesHeader, false);

    // [Then] Sales Header is released
    LibraryAssert.AreEqual(true, true, ''); // Ugh, this is a bad test
end;
```

Page Scripting Tool for Acceptance Testing

BC

LIVE DEMO

INTERMEDIATE

FUNCTIONAL

I will show how the page scripting tool in the Business Central web client lets users record interactions with the user interface (UI), such as opening pages, selecting actions and filling in fields.

I would like to show how users can then replay the recording to show the exact actions in the UI and as the recording is replayed, how you receive real-time status feedback for success or failure.

Michael
de Jager

Jose
Azevedo

You can also drag and drop a recording file here.

Page Scripting

- Best Practices
- Start recording from the role center
- Filter down a list
- Create the entity you'd use
- Break down into small recordings
- Yyyy-mm-dd / hh:mm:ss (hh in 00-24)

Investment/roadmap paths

GA and fit and finish

GA for current scope, i.e. out of Preview (accessibility, documentation, UX updates, telemetry, etc)

Support simple edit scenarios on existing steps (like delete, insert, change order)

Capture initial context (role, page etc) and validate/use that on replay

Localize step descriptions

Completeness of current features

Manage suite in UI

Manage parameters in UI

YAML documentation

Capture extensions involved in script and validate on replay

Increased capture support for controls and highlight those that cannot be captured

Additional features

Save and manage scripts and suites on server

Custom replay speed (i.e., slow down)

Allow testing for values in datasets

Cross-role processes, including sharing of variables

Support multi-tasking feature (multiple windows)

Run scripts "headless" without client

Additional uses

Using tool to document processes, possibly with screenshots

Test conversion to BCPT or AL test cases

Using tool for templating/macros for common user processes

Data-Driven Testing

How to be a Prompt Engineer

BC

INTERMEDIATE

FUNCTIONAL

TECHNICAL

Do you want to know what my first experience with generative AI was? Wildly inconsistent results. Half the time, the response wasn't in JSON so I could parse it, and when it did work, it was slow. The problem? My prompts were bad. So, I started figuring out how to make them better.

What structure works best? How to determine the best temperature level? Should I care about function calling? Will my prompts perform well with 100 users?

The more I figured out how to use generative AI, the more I realized I was becoming a "prompt engineer". You know, the thing that's supposed to replace all developers in the future. I'm not sure about that. But in the AI era, we need to know how to work with it.

If you'd like to skip all the trial-and-error steps, join this session to learn how to take your prompts from a simple request that returns wildly inconsistent results to a complex prompt that makes your new AI features more stable and reliable.

Tine
Starič

Testing prompts

AI changes... All the time...

Determine if a discount of **12%** can be approved for an order value of **\$8,000**

Determine if a requested discount can be approved based on order value.

value > 10k – max discount 15%

5k < value < 10k – max discount 10%

value < 5k – max discount 5%

Testing prompts

AI changes... All the time...

Determine if a discount of **12%** can be approved for an order value of **\$8,000** – **Reject**

Can I give **7%** discount for **\$6,000** order – **Approve**

Is a discount of **17%** allowed for an order of **\$20,000** – **Reject**

For order value **\$3,000** am I allowed to approve a discount of **8%** – **Reject**

Is a **20%** discount acceptable for a **\$25,000** order? – **Reject**

Would a **5%** discount be allowed on an order value of **\$3,000**? – **Approve**

Is a **2%** discount permissible for an order worth **\$1,000**? – **Approve**

Testing prompts

AI changes... All the time...

```

Data-Driven Testing

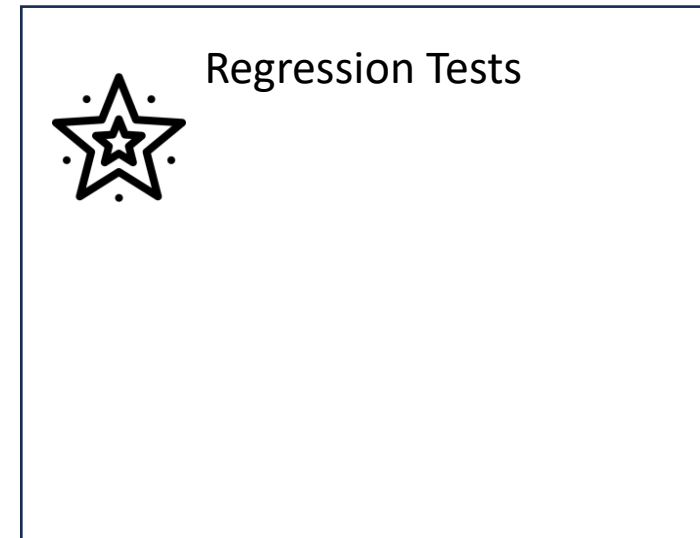

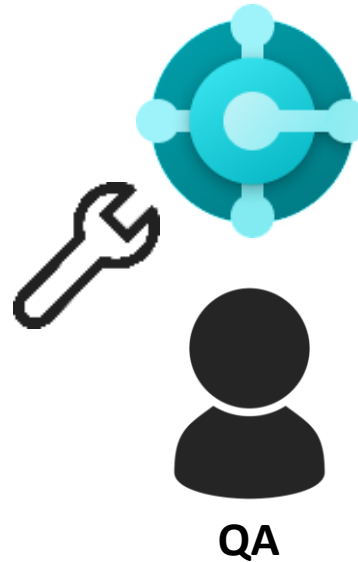

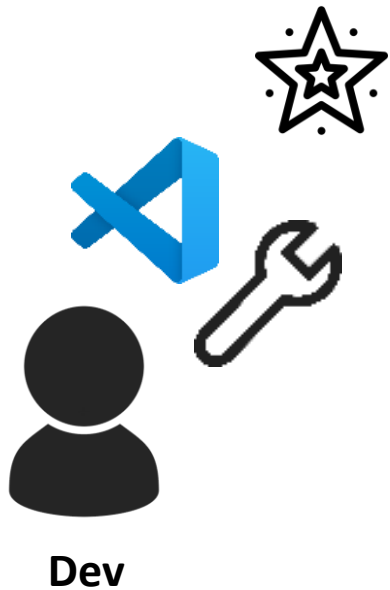

Data Drive Testing

	PS (Page Scripting)	TA (Test Automation)	DDT (Data-Driven Testing)
Who?	End Users	Developers	Developers + Testers
Goal	UAT	Continuous regression and unit testing	Continuous regression and unit testing
Scenario	"Just start"	Given - When - Then	Given - When - Then
Test isolation	No	Yes and No	Yes and No
Run in Pipelines	Yes	Yes	Almost there...
Duration	Mostly longer	It depends 😊	Similar to TA
Dataset	Yes	No	No

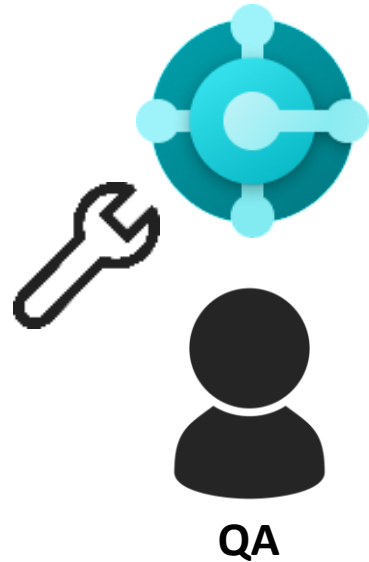

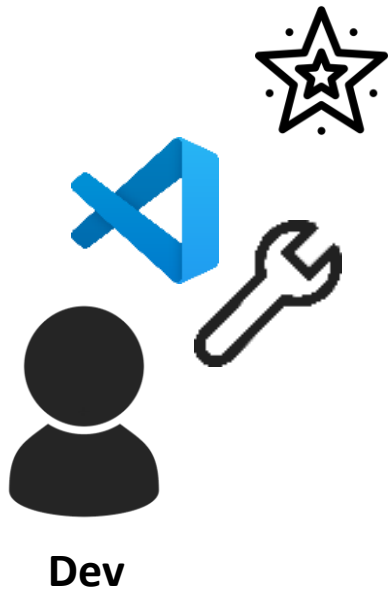

How it all comes together

Feature	Status	 Target	 Priority	 Notes
Create Sales Order	 AL Test	—	—	Already automated
Post Sales Invoice (VAT)	 DDT	 DDT	 High	QA expanding coverage
Reopen Posted Purchase Invoice	 Page	 AL Test	 High	Easy automation win
Create Purchase Order	 None	 AL Test	  Medium	Common flow, not yet tested
Create Recurring Sales Invoice	 Page	 DDT	  Medium	Repeating logic, fits DDT
Approve Sales Quote	 None	 AL Test	 Medium	Flow completion test
Modify Credit Limit	 None	 No Test	—	Not worth automating
Apply Ledger Entries	 DDT	 DDT	 High	Great DDT candidate

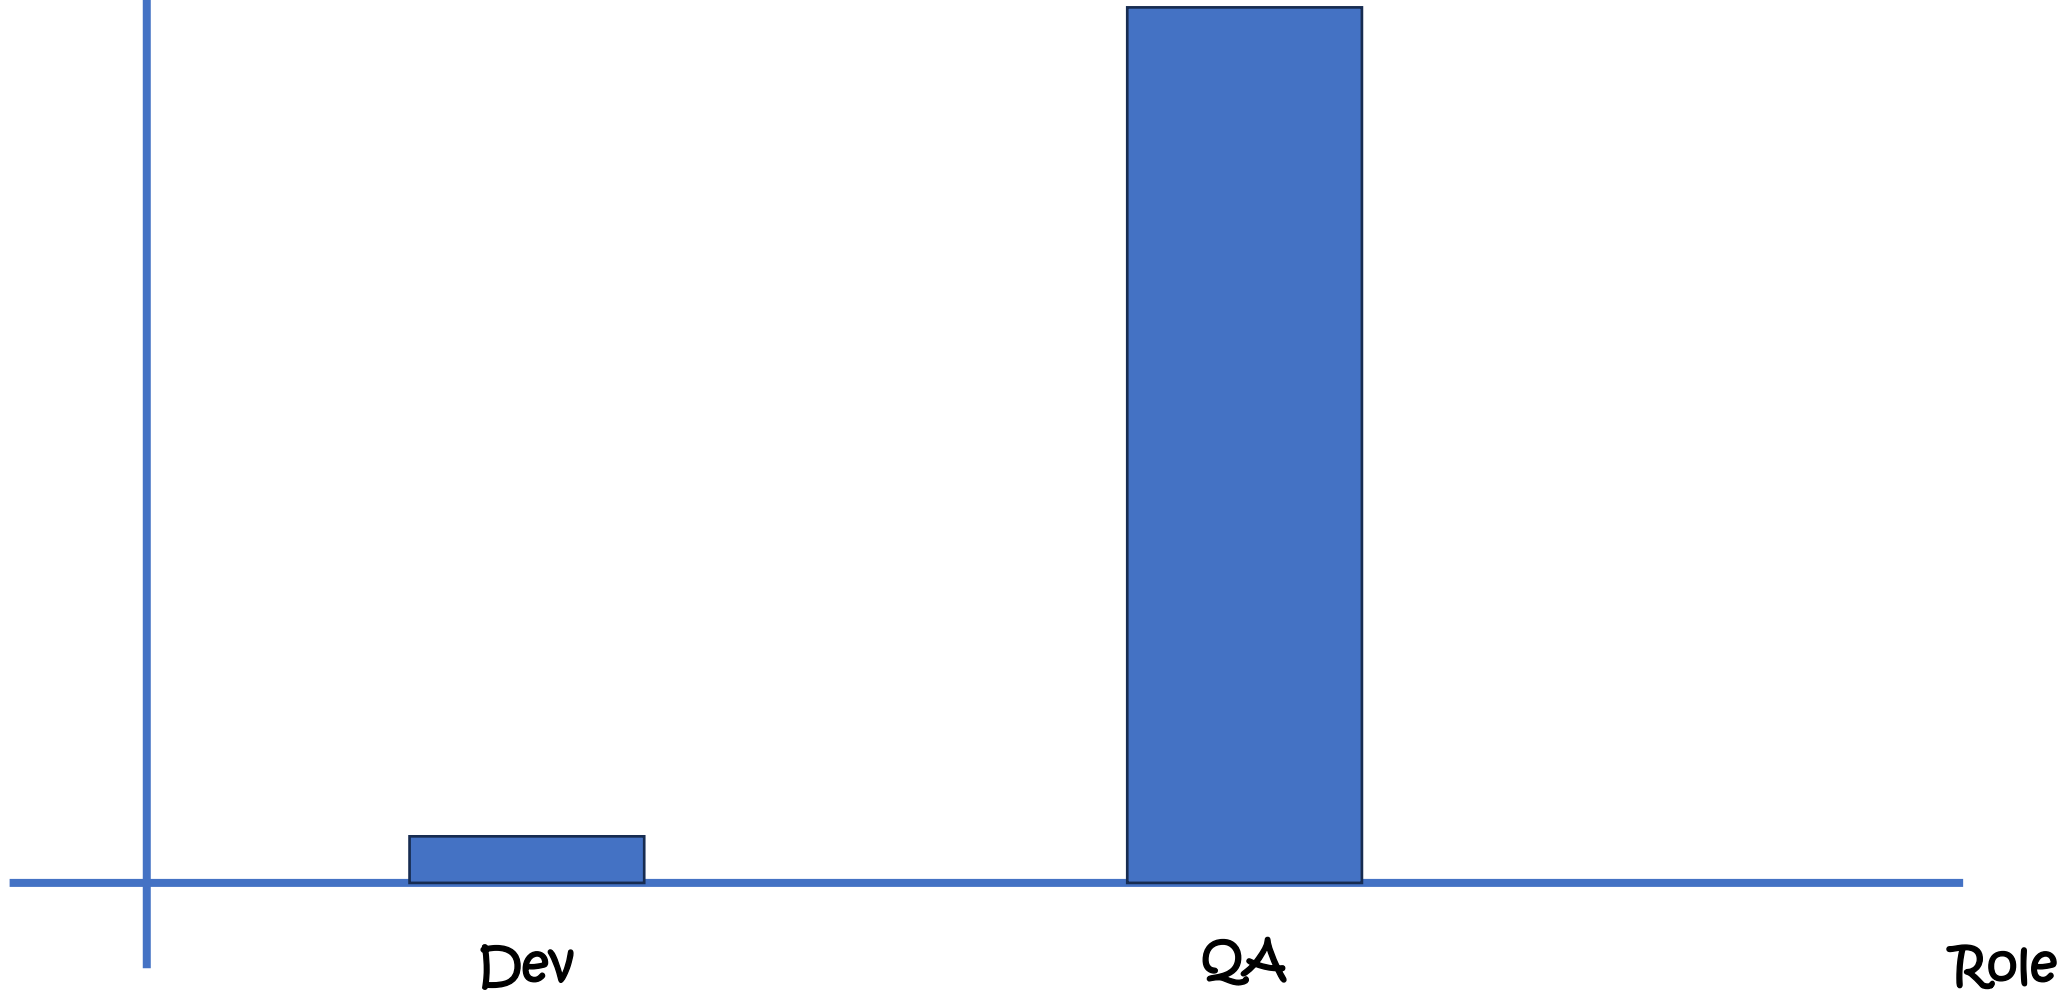

Traditional Testing

Effort

Page Scripting

Effort

Data Driven Testing

QA

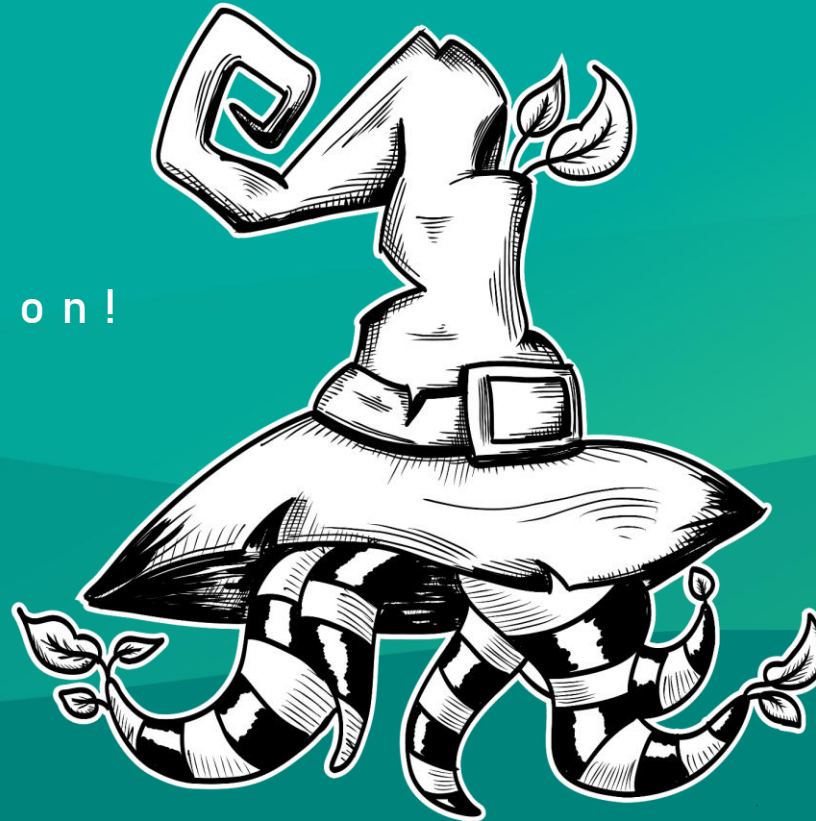

Role

Summary

- Testing is still needed
- Page scripting give control to Consultants
- DDT keeps the benefit of code, but gives more control to consultants
- Test plan is still important, otherwise you have no clue what you're testing
