

Error-Proof Automation: Proactive Error Handling in Power Automate

Tine Starič

Software Architect @ Companial

Agenda

- Business Case
- Error handling
- Small nuggets of wisdom

Power Automate can be simple

 Follow up on a message By Microsoft Instant 435179	 Schedule a reply By Microsoft Instant 266150	 Save a message to OneNote By Microsoft Instant 137362	 Create a Planner task when a channel post starts with TODO By Microsoft Automated 89490
 Forward emails to a channel By Microsoft Automated 86814	 Notify a team when Planner tasks change status By Microsoft Automated 31845	 Analyze emails sentiment with AI Builder and send results to Teams By Microsoft Automated 28946	 Find a meeting time with sender By Microsoft Power Automate Community Instant 21622

But just because they're simple doesn't mean they're not business critical

If they fail, you get a nice email notification about it

Power Automate

❗ 1 of your flow(s) have failed

The flow(s) listed failed in the past week and may need your attention.

1 Notification:

Flow name	Failure count
every hour send me a reminder	1

If you need more help, please visit the [Power Automate](#) support page.

But only once per week

Power Automate

! 1 of your flow(s) have failed

The flow(s) listed failed in the past week and may need your attention.

1 Notification:

Flow name	Failure count
every hour send me a reminder	168

If you need more help, please visit the [Power Automate](#) support page.

And only the flow owner gets the email...

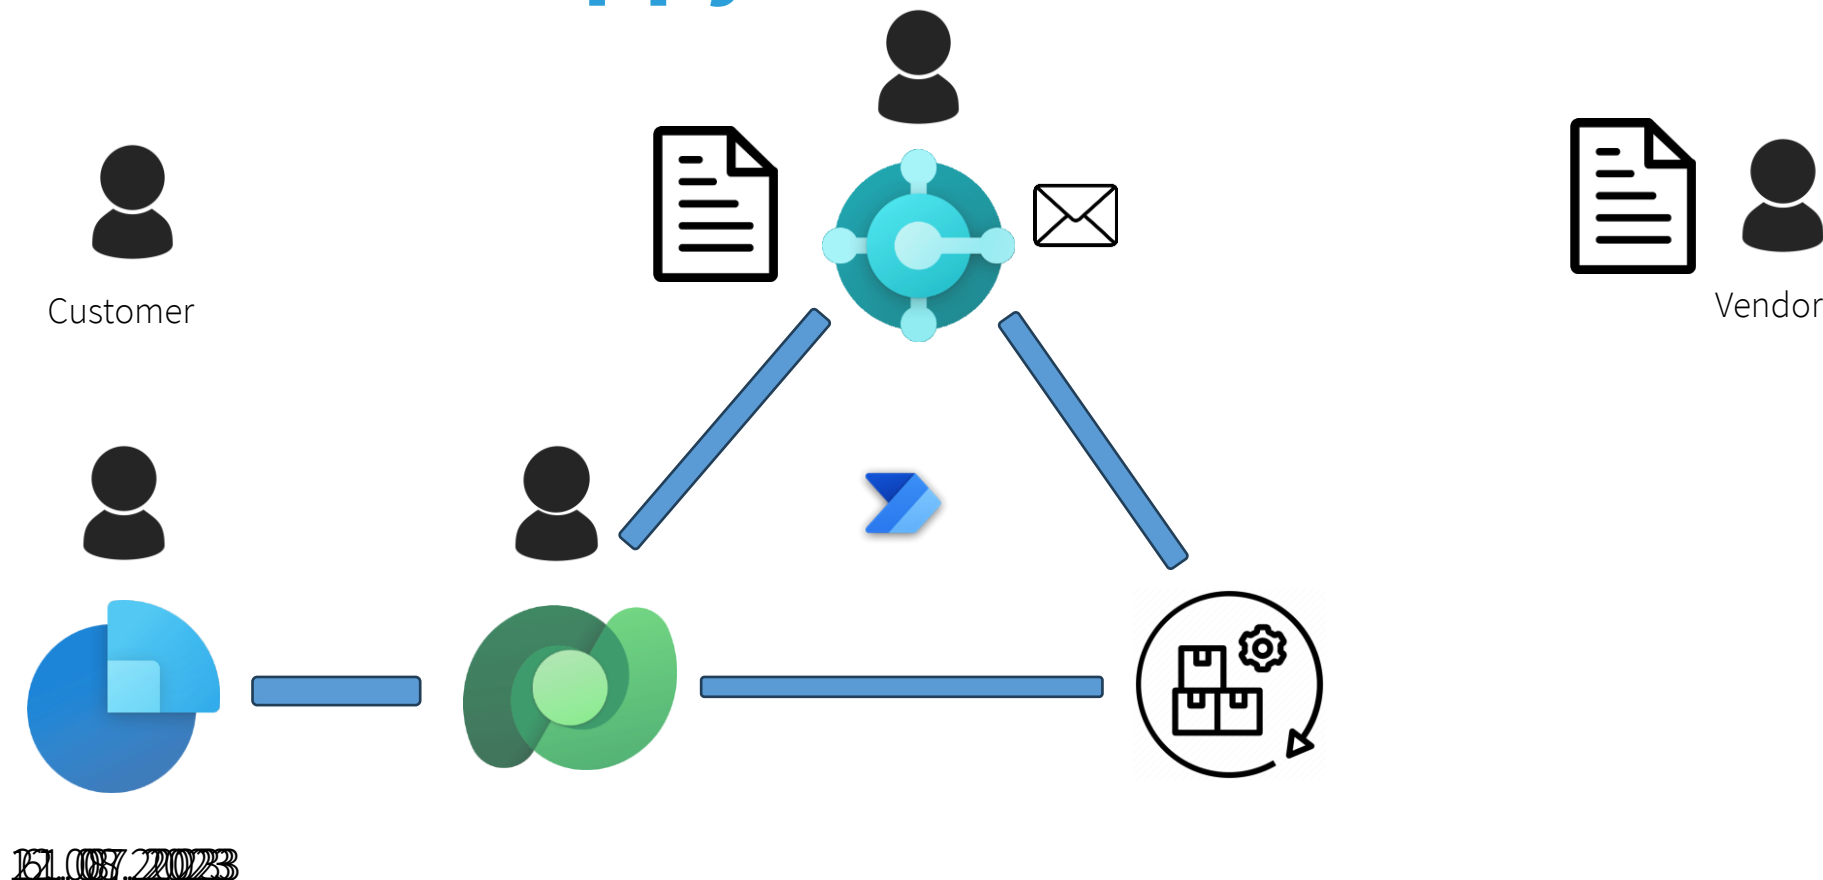

Which is usually a service account

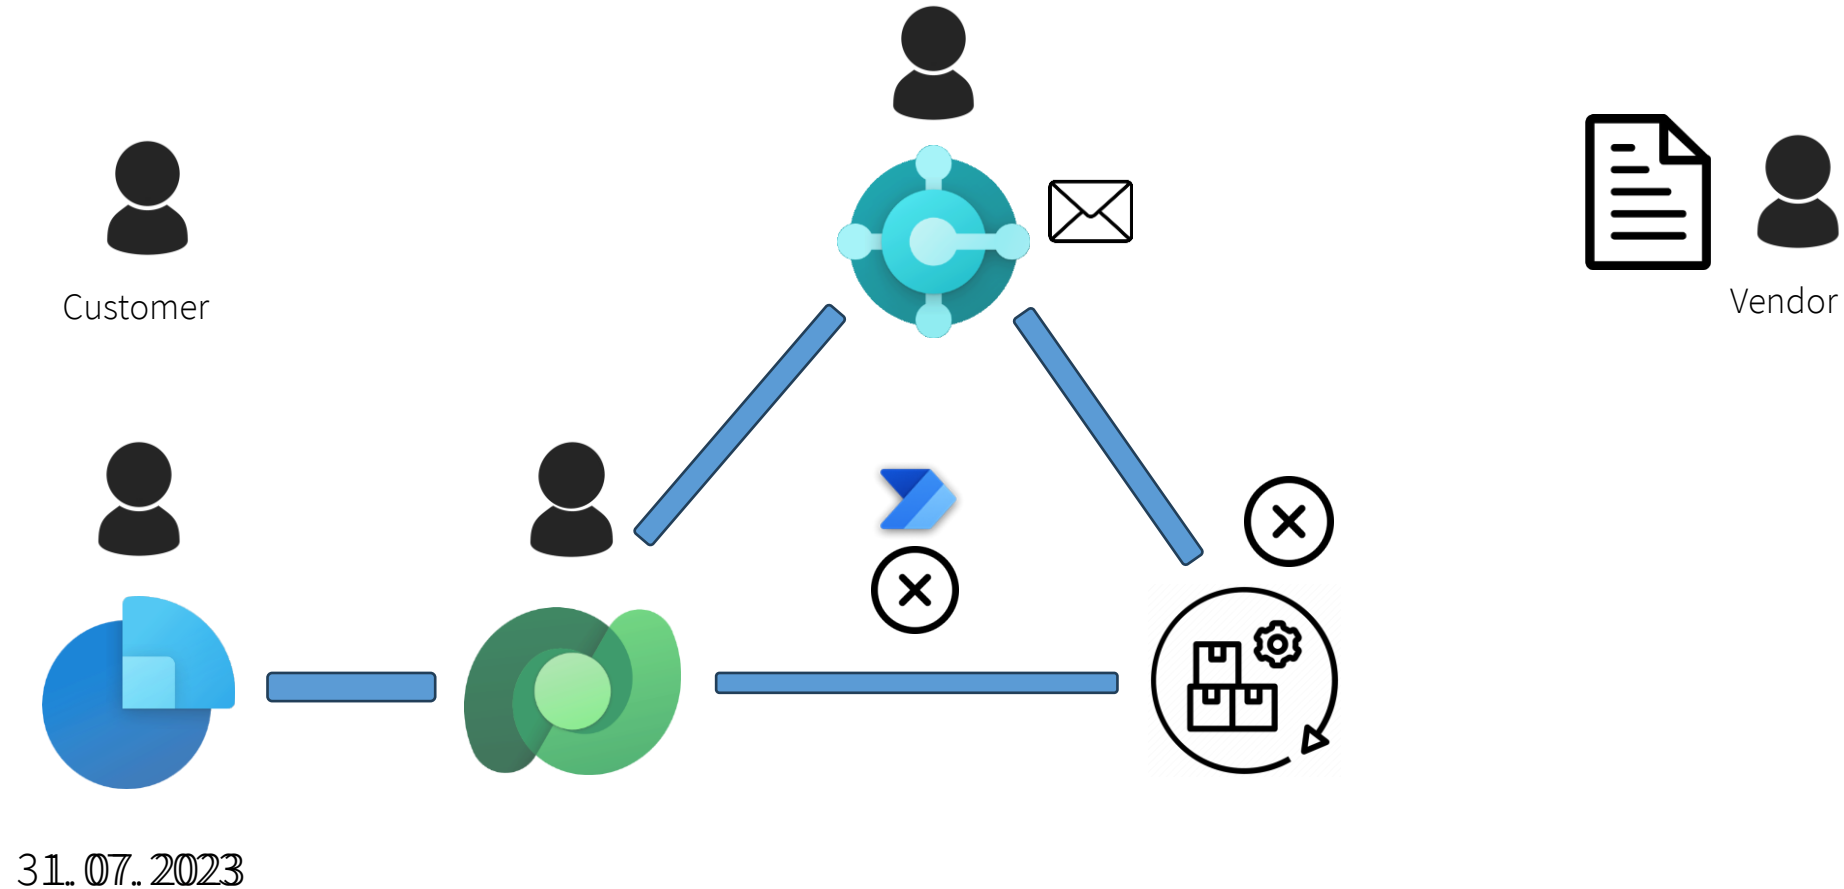

That doesn't have an inbox

This is how a happy scenario looks like

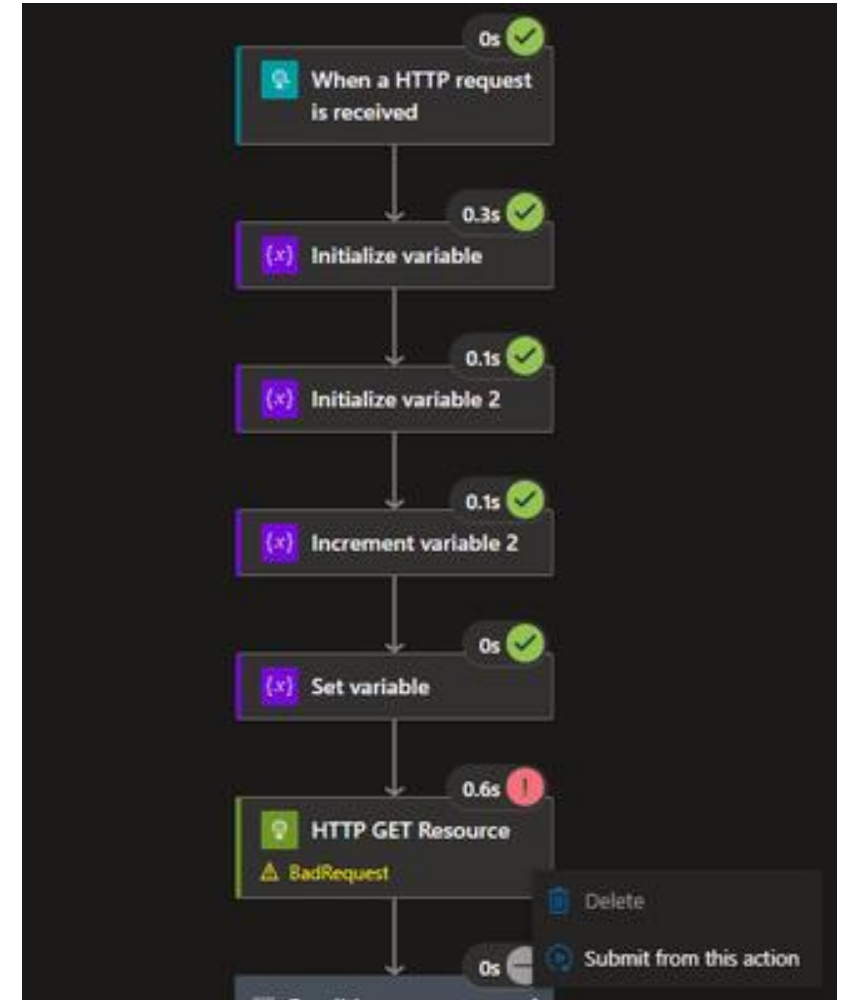

And this is how it doesn't

More nuggets of wisdom

- Analysis of a single flow
- Power Platform Admin Center Flow Analysis
- Logic Apps
- CLI for Microsoft 365

Key Takeaways

- We need to error-handle our critical flows
- Out-of-the-box error handling is bad
